

Agile and lean handling of pharmaceutical powders

Matcon specialise in providing efficient and flexible systems for handling of powders, granules and tablets using IBC systems.

We offer a complete range of IBC solutions to pharmaceutical manufacturers worldwide. We have the expertise to interface with other process equipment ensuring the system operates at maximum effectiveness.

THE MATCON ADVANTAGE

Product quality is improved with the Cone Valve

Homogeneity of mix is maintained during transfer of materials

Contained and dust-tight materials handling

Complete, controlled discharge

Improved productivity with larger batch size capabilities

The unique Cone Valve Technology at the heart of the Matcon IBC system protects against segregation of blends, and ensures complete, controlled discharge.

For **Wet Granulation** processing, the Matcon Cone Valve IBC delivers fast, complete and contained filling of the Granulator without blocking & bridging.

Collecting *multiple granulated 'lots'* into a single large IBC saves costs. Large batches of more than 1200Kg can be blended and discharged without problem thanks to the Cone Valve technology which prevents bridging and segregation even at these larger IBC sizes.

For **Dry Granulation** and **Direct Compression** processing, the homogeneity of the blended powders is critical to the quality of the final product. The Matcon IBC system maintains the quality of blend right up to the inlet of the Roller Compactor or Tablet Press, ensuring the highest quality output every time.

We specialise in providing complete materials handling solutions in the Food, Nutrition, Pharmaceutical and Chemical sectors.

We're not just an IBC provider, but a true partner helping you accomplish the right system for your needs.
